## Elementis Commits to Responsible Water Use

At Elementis, the products we supply and how we manufacture them have an impact on everyday life. Through our focus on innovation, collaboration, and environmental stewardship, we can minimize our environmental impact, inspire our employees, and deliver products and solutions that are good for the world. But we are more than just a company – we are a global community capable of making a positive change in the world.

Due to our organization's strong values, Elementis is committed to using water wisely. The purpose of this policy is to establish our commitment and actions for positive water stewardship. Elementis will strive to understand our water risks, our water use, and our water impacts.

Paul Waterman  
CEO  
April 2021

### To achieve this, we will:

Ensure responsible water use at all our facilities and use smart and innovative practices to optimise water consumption

Ensure our wastewater is fully compliant and treated to the levels that sustain aquatic life where discharged

Understand our water risks and opportunities by using established tools to guide our efforts

Monitor and minimize the impact of water use on operations and collaborate with our customers on water stewardship issues

Align with the UN Sustainable Development Goals relating to sustainable management of water and sanitation for all

### We are committed to:

Reduce water usage in operations by 10% by 2030

Optimize water consumption across our operations, reduce the water footprint of our products and implement appropriate wastewater treatment at our facilities to protect water habitats.

Transparency on our efforts relating to water stewardship and continue to voluntarily respond to the CDP water submission

Drive awareness of water conservation and share practices across all sites

Implement applicable Water Stewardship standards in an appropriate number of our manufacturing facilities by 2030 and work with stakeholders to achieve four outcomes

- good water governance
- sustainable water balance
- important water-related areas, and
- safe water, sanitation and hygiene
